Missouri Census Update

Missouri Census Data Center, Missouri State Library

Spring/Summer 2001

Census 2000 data now available!

Missouri's population total: 5,595,211

esults from Census 2000 show Missouri grew in population by nearly one-half million people (478,138) over the last decade—an increase of 9.3 percent.

In the state, lower birth rates during the Great Depression and World War II were demonstrated by the fact that the age 55+ population decreased as a percentage of total population between 1990 and 2000—down slightly from 23 percent to 22.6 percent of total population. However, the population bulge of Baby Boomers nearing retirement was reflected by the increase in the percentage of total population in the age 35-54 category—up from 24.6 percent of total population in 1990 to 29.2 percent of total population in 2000.

Census reports also show the following for the year 2000:

- Missouri ranked 17th among states in total population.
- Median age in Missouri was 36.1, up from 33.5 in 1990.
- Among Missouri counties, Adair County, where Truman State University in Kirksville is located, had the lowest median age (27.9 years); Hickory County, in the Lake Pomme de Terre area, had the highest median age (49.7).
- The largest metropolitan statistical

area (MSA) in Missouri was St. Louis, where total population on the Missouri side of the MSA reached 2,003,762 (the Missouri side of the St. Louis MSA includes seven counties in Missouri and the City of St. Louis).

Information from the questions asked of all respondents to Census 2000 is now available to the public. Two major products from the Census Bureau have been released: 1) Census 2000 Redistricting File—also known as the Public Law 94-171 File—and 2) Summary File 1. Summary File 2 will be released during the fall of 2001. This file will include population and housing characteristics for many detailed race, Hispanic, and American

2.	St. Louis348,189
3.	Springfield151,580
4.	Independence113,288
5.	Columbia
6.	St. Joseph73,990
7.	Lee's Summit70,700
8.	St. Charles60,321
9.	St. Peters51,381
10.	Florissant50,497

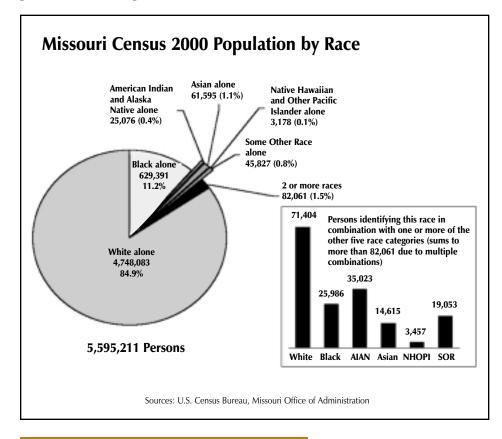

Understanding race categories in Census 2000

Census 2000 represented the first time in our nation's history that respondents were allowed to select more than one race category when answering the census. During the 1990s, the Office of Management and Budget (OMB) revised standards for collecting and tabulating data on race and ethnicity, which resulted in the multiple race information that is now available in Census 2000. This means Census 2000 categories for race are more detailed than ever before and can be shown in as many as 63 categories.

When working with race data in Census 2000, keep in mind the first number you usually see under "value" and "percent" indicates the number who chose that race alone, the second number or percentage (always a number or percent equal to or greater than the first number) indicates the total number who selected this race alone, plus the number who selected this race in combination with one or more additional races.

To obtain a number that equals total population in Census 2000, add the numbers for: 1) white alone, 2) Black or African American alone, 3) American Indian or Alaska Native alone, 4) Asian alone, 5) Native Hawaiian and Other Pacific Islander alone, 6) other race alone, and 7) total multi-racial.

Also remember for census purposes Hispanic or Latino is an ethnic designation, not a race category. The Hispanic and Latino population is also included in one (or more than one if they selected multiple races) of the race categories. The 1970 decennial census was the first to have a question about Hispanic origin on the sample or "long" census form. Since 1980, this question has appeared on the 100 percent or "short" form.

Vol. 5, Nos. 1 & 2 - 2001

Missouri Census Update (ISSN 1092-9509) is published quarterly by the Office of the Secretary of State to fulfill contractual obligations to the U.S. Bureau of the Census in connection with the State Data Center Program authorized under Title 13, United States Code, Section 8(b). The newsletter is distributed to the Census Bureau, other state data centers, affiliate agencies, libraries, universities, state agencies, and other interested parties.

For more information about the newsletter or the Missouri Census Data Center, contact the MCDC Coordinator, Missouri State Library, P.O. Box 387, Jefferson City, Missouri 65102-0387; tel: 573-526-7648; http://www.oseda.missouri.edu/ mcdc/index.html

The Missouri Census Data Center has one-sheet overviews of Census 2000 information from Summary File 1 posted on the Web at http://mcdc2.missouri.edu/ websas/dp1 2kmenus/mo. The following Missouri geographies are available: metropolitan areas, counties, towns (places), minor civil divisions (townships), census tracts, census block groups, school districts, state legislative districts, and zip codes.

Edgar Springs, Missouri, population center of the **United States**

dgar Springs, Missouri, in southern Phelps County, is the new population center of the United States. Each decade, after it tabulates the decennial census, the Census Bureau calculates a mean center of population. This center is set in the place where an imaginary, flat, weightless and rigid map of the United States would balance perfectly if all residents were of identical weight. When the first census was conducted in the U.S. in 1790, the center of population was in northeast Maryland. Since then, the population center has moved sharply west across the country, with some gradual movement to the south. The population center was first located in Missouri after the 1980 census, when an area near DeSoto, Missouri, was named the mean population center. Steelville and Edgar Springs followed as mean centers in 1990 and 2000, respectively.

A special celebration was held in Edgar Springs on April 23, 2001, when representatives from the Census Bureau gathered with local and state representatives to officially proclaim the town the new population center.

Fifty-four percent of the nation's population lived in the 10 most populous states in 2000. California (population 33.9 million) was the most populated state and accounted for 12 percent of the nation's population.

In the State of Missouri, 58 percent of the population lived within the 10 most populated counties in 2000.* St. Louis County (population 1,016,315) was the state's most populated county and comprised 18 percent of the state's total population.

*The City of St. Louis is calculated as a county equivalent for statistical purposes.

43 million people in the U.S. changed 🔊 residence last year

In keeping with our fast-paced society, the Census Bureau's 2000 Current Population Survey indicated that 43.4 million Americans moved between March 1999 and March 2000.

The following breakdowns show the types of moves that took place during that time period:

- Most people who moved (56.2 percent) moved to another location within the same county.
- 20.3 percent moved to a different county, but stayed in the same state.
- Close to one-fifth of movers (19.4 percent) moved out of the state where they had been living to another state.
- 4 percent of movers came from abroad.

Not surprisingly, moving rates were highest for people in the age 20-29 category. Approximately one-third of people within this age category moved, often because of marriage, a child's birth, or a new job.

Source: Current Population Reports: Geographical Mobility: March 1999 to March 2000 by Jason Schachter. Issued May 2001. U.S. Census Bureau.

Challenging the Census 2000 count

The Census Bureau has set up the Count Question Resolution Program as a way for local governments to formally challenge the Census 2000 Summary File 1 count. The program will be in place until September 30, 2003.

The following examples are the types of corrections that will be considered under the Count Question Resolution Program:

- ➤ Boundary corrections: Revise inaccurate boundaries to reflect those in effect January 1, 2000
- ➤ **Geocoding corrections:** Place erroneously-located living quarters and associated population within correct boundaries/census blocks
- ➤ Coverage: Add or remove specific living quarters and persons residing therein that were identified during the Census 2000 process, but erroneously included or excluded due to processing errors. Addresses for living quarters that were not found to be erroneously excluded due to processing errors will be added to the Census address list for use in future statistical programs of the Census Bureau.

For additional information about the Count Question Resolution Program and detailed information about the supporting evidence that is required for a challenge, see information posted at http://www.census.gov/dmd/ www/CQR.htm or call 866-546-0527 (toll-free).

Town and county officials who need block-level data to complete a local redistricting project or to assess the accuracy of the Census 2000 count within their jurisdiction can contact the Missouri Census Data Center at 573-526-7648 to request this information.

State & County QuickFacts electronic tool for census information

The dramatic decrease in the number of print products published by the Census Bureau has led the agency to create a variety of electronic resources on its website. In addition to American FactFinder, the main Web tool for accessing Census 2000 data and other Census Bureau information, is State and County QuickFacts, a particularly popular and easy way to display a variety of demographic data at the state and county levels.

More specifically, QuickFacts provides information such as population change between 1990 and 2000, race breakdowns and number of persons per square mile, and the most recent data about retail sales, local government employment, and number of building permits issued for housing units.

The QuickFacts Project recently won the Census Bureau Director's Award for Innovation and is being highlighted in publications such as *State and Local Government Computer News*. Access QuickFacts from the Census Bureau's homepage at http://www.census.gov.

Quick*Facts* answered the following questions:

- How many people are there per square mile in Missouri's most populated county, St. Louis County? 2000.6 persons per square mile, compared with a state average of 81.2 persons per square mile
- What number of housing units were authorized by building permits in Greene County in 1999? 1,805
- What was the percentage change in population in Howell County between 1990 and 2000? *An increase of 18.4 percent, compared to state growth of 9.3 percent*
- How many people lived in Jackson County in 2000? 654,880
- What were per capita retail sales in Buchanan County in 1997? \$9,756, higher than the state average of \$9,482
